Hybrid-Maize: A Simulation Model for Maize Growth and Yield

Navigation

Hybrid-Maize

Overview

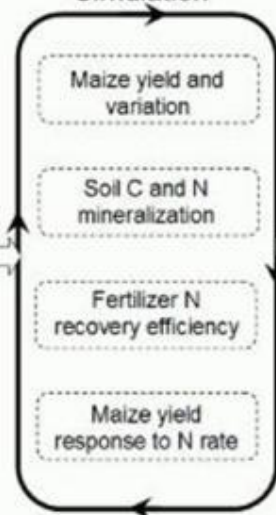

# Maize-N Model

## The inputs, engine, and outputs of Maize-N model

### Inputs

- Long-term daily weather record:  $T_{max}$ ,  $T_{min}$ , solar radiation
- The maize crop: maturity, planting date, pop, price, and yield history (optional)
- Last crop: type, yield, residues management
- Tillage: type & operation
- N fertilizer: type, price, doses and timing
- Soil: SOM content, acidity, texture, bulk density
- Soil nitrate before planting (optional): amount and sampling time
- Manuring: type, amount & timing

### Simulation

### Outputs

- EONR
- Fertilizer amount
- Fertilizer cost
- Fertilizer recovery efficiency
- N use efficiency
- Yield potential
- Attainable yield
- Total indigenous N uptake (IN)
- Contributions to IN from N carryover, SOM, crop residues, manure, and irrigation water.
- Seasonal soil C & N mineralization dynamics
- Interactive yield response to N rate

[Go to Maize-N collaborators' page](#)

simulates fertilizer requirement for Maize crop grown under intensive management.

old potential and its variability based on historical weather data; and fertilizer N required based on climatic and management factors such as plant density, N application method and timing, manuring, and soil characteristics.

CI=90%

# *A Multifunctional Landscape Perspective*

- 
- Production of food, feed, fiber, and fuel
  - Carbon sequestration
  - Water and air quality (reducing nutrient losses)
  - Wildlife and recreation

Does this restructuring of farms need to be part of our preparation for truly intensive crop production?

# Controlled drainage as part of the intensification package

## University of Minnesota, Lamberton

| Year | Performance indicator         | Drainage |            |
|------|-------------------------------|----------|------------|
|      |                               | Free     | Controlled |
| 2008 | Soybean yield, bu/A           | 22       | 19         |
| 2008 | NO <sub>3</sub> -N load, lb/A | 18       | 7          |
| 2009 | Corn yield, bu/A              | 202      | 224        |
| 2009 | NO <sub>3</sub> -N load, lb/A | 3        | 2          |

### Multifaceted solution to drainage issues:

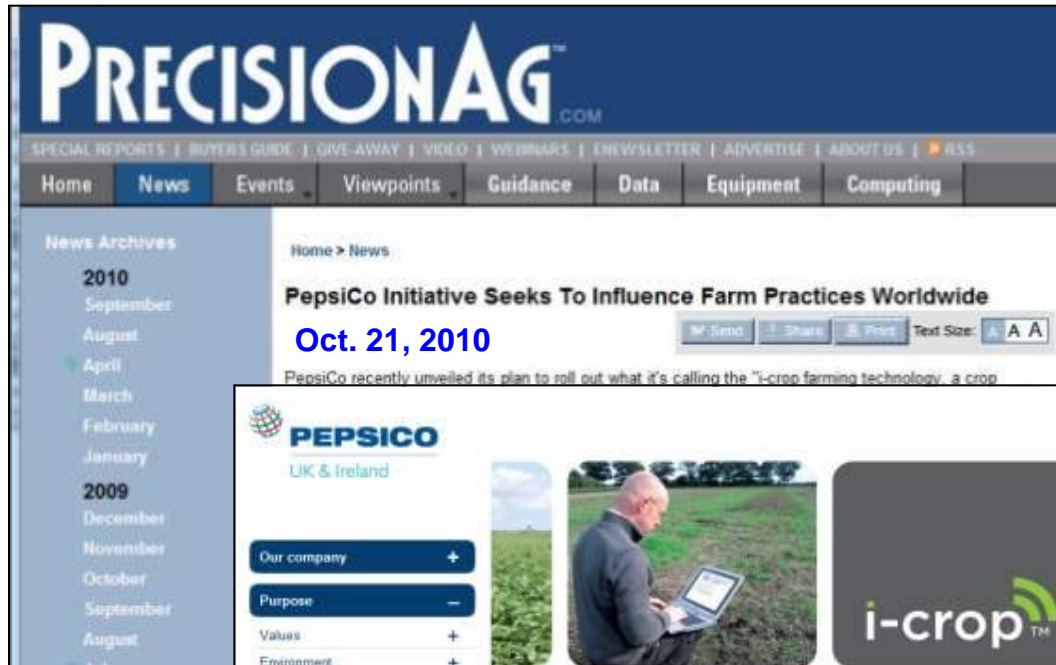

- Controlled drainage
- Appropriate drainage system designs
- Bioreactors
- Two-stage/managed ditches
- Buffers
- Water storage
- Side inlet controls
- Alternative practices

# Demand for More Sustainable, Less Chemically Dependent Agriculture

## Wal-Mart sets out fresher-foods goals

Retailer aims

STEVE PAINTER  
ARKANSAS DEMOCRAT-GAZETTE

Wal-Mart Stores Inc. announced several new goals Thursday aimed at getting more fresh foods on its shelves while at the same time reducing the environmental impact of growing those products.

The announcement came as Wal-Mart executives and employees met with suppliers and representatives of environmental groups at the company's headquarters in Bentonville. About 700

of Wal-Mart's business. Yet only four of our 39 public sustainability goals address food," Mike Duke, president and chief executive officer, said in prepared remarks for the gathering.

...purchased from small and medium farms.

■ Train a million farmers and farm workers in sustainable farming practices and crop selection.

■ Boost the income of small farmers supplying the retailer

Michelle Harvey, project manager in Bentonville for the corporate partnerships program of the Environmental Defense Fund, said the initiative revealed Thursday began early in the summer of

See WAL-MART, Page 6D

**“.....boost the incomes of small and medium-sized farmers....while reducing the use of pesticides and fertilizer”**

*Arkansas Democrat- Gazette, October 15, 2010*

# EPA Lays Out Five-Year Plan on Agency Priorities – Oct. 7, 2010

- **Five strategic goals to advance EPA's environmental and human-health mission:**
  - Taking action on climate change and improving air quality
  - Protecting America's waters
  - Cleaning up communities and advancing sustainable development
  - Ensuring the safety of chemicals and preventing pollution
  - Enforcing environmental laws

**Preparation should likely include use of environmental footprint estimation tools  
(ex - Field to Market Field Print Calculator)**

# Leading world exporters of corn

# Preparation in the “shining city on the hill”

- **Communicating** to funding agencies the critical need for research on agronomic and environmental aspects of intensively managed high yield systems
- Example of the challenge: research proposals for Federal support are criticized for being too focused on corn, even though corn ...
  - Greatest crop acreage; A major U.S. export
  - Consumes 43% of fertilizer N, 45% of P, and 44% of K
  - Primary near term source of feedstock for biofuels
  - Very effective at sequestering C
- Intensification of corn production is being viewed as the problem rather than the solution ... **we have a communication challenge**

# Preparing for intensification

- **Cropping intensification can be viewed as either a solution or a problem ... increases the importance of preparation**
- **Preparation is needed:**
  - **In the field**
    - See Forum topics
    - Soil fertility that will support intensive production
    - A focus on N efficiency through N management & uptake maximization
  - **On the farm**
    - Management (and research) beyond fields to landscapes
  - **In the city**
    - Communicating credible environmental footprints to the public
    - Refinement of funding agency priorities
    - Utilizing 4R Nutrient Stewardship in communication efforts
